

ESICM Webinar

Vasopressor Management in Septic Shock: General Overview and Personalized Approaches

Thursday 8 April
from 16.00-17.00 hrs CEST

Despite important therapeutic advances, septic shock remains a major challenge associated with 30% to 40% hospital mortality. Vasopressor therapy is a fundamental treatment of septic shock-induced hypotension as it aims at correcting vascular tone depression and improving organ perfusion pressure.

This free webinar will provide a general overview of severe septic shock and consequently discuss the benefits of second-line vasopressors and their use in COVID-19 patients.

The Experts:

Co-Presenters:

Dr Jacob JENTZER

Cardiac intensivist and Director of Cardiac Intensive Care Unit Research at Mayo Clinic, Rochester, Minnesota (US).

Prof Arthur R. H. VAN ZANTEN

Chair, Department of Intensive Care and ICU Research in Gelderse Vallei Hospital, Ede (NL); professor of Nutrition and Metabolic Stress by special appointment at Wageningen University & Research (NL).

Moderators:

Prof Dorel SANDESC

Head, A. I.C. clinic, County Clinical Hospital no.1, and Professor, "Victor Babes" University of Medicine and Pharmacy, Timisoara (RO); Vice-President, Romanian Society of Anesthesia and Intensive Care.

Prof Ludhmila HAJJAR

Cardiology Associate Professor, University of São Paulo (BR). Cardio-Oncology Coordinator at the Heart Institute, Hospital das Clínicas, FMUSP. Intensive Care Unit Coordinator at Hospital Paulistano.
